Put Some Flex Into Your Budget with STABILOY® MC Cable: Save 50% Over Pipe & Wire

There is no question in this day and age that everyone in the business is looking for ways to cut costs without cutting quality. Coming in under budget sometimes means making a change. That's when switching to "no-pull" STABILOY® MC Cable can be the answer.

If you're an electrical contractor who changes from traditional conduit and copper wire installations to STABILOY MC Cable, you can, without question, realize significant savings. And when we say "significant"—we mean up to 50%. On each and every job.

Here's why. Alcan Cable's STABILOY MC Cable is an all-in-one assembly that offers fewer installation steps. In fact, STABILOY MC Cable and fittings are equivalent to all of the following: conductors, conduit, elbows, fittings and junction boxes. In addition, STABILOY MC Cable only requires one reel of cable per run vs. five reels for conductors in conduit. Just as important, the strong, lightweight, aluminum alloy armor features the flexibility to bend around corners and is not limited by the 360 degree rule.

It just makes sense. Fewer installation steps save time and materials. Easier installation steps save even more time and materials. All of which saves money. Significant money.

One hundred percent tested for quality, Alcan Cable's STABILOY MC Cable is available with or without a PVC jacket, and meets or exceeds the requirements of the NEC and applicable UL Standards.

For ease-of-use and significant cost savings over conventional pipe and wire installations, choose STABILOY MC Cable.

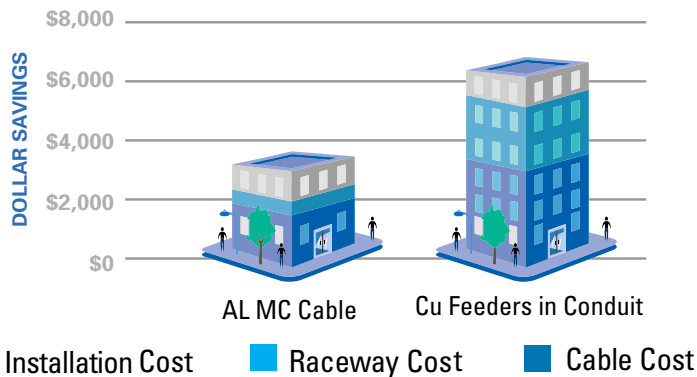

Preferred for feeder applications, aluminum alloy features:

- Superior Conductivity
- Superior Insulation
- Superior Termination

You could save up to 50% in total installed costs! Installed Cost Comparison

Comparison of Total Feeder Installation Costs

***Based on 100 ft. run of 750 kcmil AL MC Cable w/ 3/0 AL ground vs. 500 kcmil Cu in 3" EMT w/ #3 Cu ground**

For STABILOY MC Cable compared to an actual side-by-side copper cable (Cu-4") installation, the cost savings represented a 54% savings in total installed costs.
